

Tacker made of aluminium

for tacker clips

1 Universal design allows for installation of short, standard and long KAN-therm tacker clips.

2 Lightweight and durable aluminum construction resistant to corrosion.

3 Improved guide design and special weight element ensure proper guidance of clips into the slot of the device. This prevents the Tacker from jamming during operation and thus ensures a quick and safe installation.

4 The optimally selected height of the device ensures comfortable working conditions.

5 Wooden handle gives the feeling of comfort, security and safety, and provides the device with an exclusive look.

6 Construction tested in practice.

7 A practical support mechanism allows you to work comfortably.

8 Aesthetic and compact design gives a feeling of complete professionalism.
